主办单位: 上海市停车服务业行业协会 / 上海国际智慧停车展览会

Organiser: Shanghai Parking Service Trade Association / Parking China

In the face of increasingly complex urban transportation and growing parking demands, mega-cities like Shanghai are undergoing a profound smart transformation of their parking management. Traditional parking models have long suffered from low efficiency and uneven resource allocation, hindering industry service improvements and sustainable urban development. To promote the smart upgrade and high-quality development of the parking management industry, the parking forum has been organized. The aim is to build a cross-industry exchange platform, bringing together government, smart parking companies, and industry representatives to jointly explore the future direction and implementation path for the sector. The forum will focus on the practical application and technological innovation of smart parking. It will provide in-depth analysis of current industry challenges and opportunities, as well as share successful case studies and advanced experiences. This will offer valuable insights and recommendations to support the smart transformation of parking management in Shanghai and across China.

EnOcean无线无源标准：助力智慧空间和节能建筑 EnOcean Energy Harvesting Wireless Solutions for Energy-efficient and Smart Spaces

主办单位：上海国际智能建筑展览会 / EnOcean联盟

Organiser: Shanghai Intelligent Building Technology / EnOcean Alliance

得益于使用传感器所生成的建筑物状态数据的智能基础设施管理系统，智慧空间形成了互联的生态系统，人和空间可以以灵活且以需求为导向的方式交互。建立在开放标准之上的免维护无线解决方案 - 例如EnOcean (ISO/IEC 14543-3-10/11) - 具有最大的灵活性、低成本的安装和经济的操作。影响员工生产力的主要因素 - 温度、空气质量、照明条件 - 可以根据建筑物内的人数进行监控和调节，在确保安全舒适的同时，降低能耗。

Smart Spaces form networked ecosystems where people and places interact in a flexible and needs-oriented way thanks to an intelligent infrastructure management system using sensor-generated building status data. Maintenance-free wireless solutions built upon open standards - e.g. EnOcean (ISO/IEC 14543-3-10/11) - allow for maximum flexibility, low-cost installation and economical operation. The factors primarily influencing employee productivity - temperature, air quality, lighting conditions - can be monitored and influenced according to the number of persons within the building. EnOcean wireless energy harvesting solutions not only help occupants to be more productive but also play a key part in optimizing the building's energy efficiency and creating a healthy space for tenants and employees.
